

I subscribe to XM Satellite Radio and pay for the wonderful service they provide. Recently, they added (at no additional fee) timely weather and road conditions for my area to their offering. Nothing else is available to me at any cost that gives me as much useful information. I understand that NAB's petition 04-160 would limit the usefulness of my XM Radio Subscription because they cannot compete with the new techonology. I understand that many people are against any change or improvement that new technology brings. I believe that one of the many roles of the FCC is to protect me from those who can't compete and want to damage those who can compete. Please reject NAB's petition 04-160
